Things to consider when completing your oil cooler drawing:

- *Oil cooler dimensions - Length, width, height. End tank size and core size.*
- *Fittings - Position, sizes and type of inlets and outlets e.g. JIC, BSP*
- *Temperature boss - E.g. 1/8 NPT, M10 X 1*
- *Mounting - Position and type - brackets, pins, bosses (again M8 works well)*
- *Fan mounts*
- *End tank shape - Square, sloped tube, custom, curved, staggered core.*

Bear in mind:

- *We can make replica oil coolers from patterns or drawings*
- *We can sometimes re-core oil coolers especially where they have complicated cast end tanks.*

We can make combined radiators and oil coolers.

We also sell fans
