Things to consider when completing your radiator drawing:

- ***Radiator dimensions - Length, width, height. End tank size and core size.***
- ***Pipework - Position, sizes and angles of inlets and outlets***
- ***Flow - Single or multipass***
- ***Filler neck - Do you need one or do you have a header tank?***
- ***Bleed - Position and size (As standard we put an M8 boss)***
- ***Temperature boss - E.g. 1/8 NPT, M22 x 1.5***
- ***Mounting - Position and type - brackets, pins, bosses (again M8 works well)***
- ***Fan mounts***
- ***End tank shape - Square, sloped tube, custom, curved, staggered core.***

Bear in mind:

- ***We can make replica radiators from patterns or drawings***
- ***We can sometimes re-core radiators especially where they have complicated cast end tanks.***

We can make combined radiators and oil coolers.

We also sell fans
